ARGELITE 71

PALLADIUM SILVER ALLOY

As robust as any gold alloy.

- Only 10% Silver
- Clinically Proven
- Works With All Regular-Fusing Porcelains
- Exceptional strength for any PFM application including implants

COMPOSITION	
70.9%	Pd
10.0%	Ag

With Argelite 71, you get a high strength alloy that can be used for both pressing and layering porcelains. The low silver content and light oxide give beautiful aesthetics, while the low density of 10.6 means more units per ounce. Start saving money today with Argelite 71.
